CONFINED SPACE ENTRY

At PSA Africa, we understand the challenges of Confined Space Entry. That's why we deliver integrated safety solutions from detection to protection. We specialise in Confined Space Entry safety. Our solutions are designed to meet industry standards and safeguard personnel during all confined space operations.

FALL PROTECTION

Our fall protection equipment allows for vertical or horizontal entry into tanks and manholes. Our equipment combines MSA tripods, winches and rescue devices to safeguard workers in confined spaces.

Built for strength, stability and quick emergency response, our systems allow safe and confident operations in even the most challenging CSE environments.

PSA Africa provides world-class fall protection for confined space entry, featuring harnesses, self-retracting lanyards and SRLs built for maximum safety and performance.

Designed to tackle the toughest confined space challenges, our equipment ensures every worker stays secure, supported, and confident. So your team can focus on the job, not the risk.

The Spreader bar provides secure and balanced support for workers entering or exiting confined spaces.

Engineered for strength and ease of use, it connects seamlessly to harness and winch systems, ensuring safe, upright retrieval and reducing the risk of injury during confined space operations.

Designed for confined space emergencies, the SKED Stretcher from PSA Africa ensures safe, controlled rescue operations.

Lightweight, durable, and compatible with tripods and winches, it forms an essential part of our complete fall protection and rescue solutions.

GAS DETECTION

The ALTAIR® 4XR Gas Detector sets the standard for durability and performance.

Offering real-time gas readings and Bluetooth® connectivity to the MSA Connect app, it ensures continuous protection and instant awareness in any confined space environment.

The ALTAIR® 5X Gas Detector redefines confined space safety with its integrated pump, probe, and sampling line allowing teams to test and monitor hazardous atmospheres before entry.

Combining rugged performance with fast multi-gas detection, it delivers confidence and protection where it matters most.

Ensure your gas detectors are always ready for confined space entry. PSA Africa's GALAXY® GX2 Automated Test Stand allows rapid, automated bump testing and calibration.

while manual testing with a pressure reducer provides a reliable alternative—keeping safety and compliance at the forefront of every operation."

SCBA

PSA Africa offers advanced SCBA systems purpose-built for confined space entry. Designed to deliver breathable air in oxygen-deficient or toxic environments.

Our equipment ensures reliable performance, comfort, and safety for every confined space operation.

HEAD PROTECTION

PSA Africa delivers head protection that meets the demands of confined space entry.

Engineered for safety, comfort, and compatibility, our helmets keep workers protected from impact and overhead hazards—allowing them to focus on the job with complete confidence.
