# FALL PROTECTION

At PSA Africa, we understand the risks of working at height. That's why we provide complete Fall Protection systems & solutions designed to meet industry standards, prevent accidents and safeguard personnel in all elevated work environments.

## TRIPOD SYSTEM

PSA Africa's Tripod System delivers dependable, compliant protection for confined space and vertical access work.

Designed for fast setup and secure anchorage, it provides the strength, stability and reliability teams need during high-risk entry and rescue operations. It's a proven, trusted solution that ensures safe access where it matters most.

## HARNESSES

Engineered to deliver reliable comfort, durability and protection for professionals working at heights or in confined spaces. These harnesses feature ergonomic designs that reduce user fatigue during extended use.

Manufactured with high-quality webbing and robust hardware, offer multiple attachment points to support fall arrest, rescue and confined space applications. With easy donning, simple one-hand adjustment and modern styling.

## PERSONAL FALL LIMITERS (PFL)

PSA Africa's Personal Fall Limiters (PFLs) protect workers at heights and near leading edges by limiting falls and controlling impact forces.

The 1.8m V-EDGE PFL is lightweight, for overhead and foot-level tie-offs, tested for horizontal use and MEWPs. The V-TEC PFL Retractable Lanyard is compact with built-in energy absorption for smooth, safe fall arrest. Both provide reliable protection for industrial and construction work.

## SELF RETRACTING LANYARDS (SRL)

Provides reliable fall protection for industrial, construction and mining environments across South Africa.

The V-TEC features a robust 6-meter stainless steel cable for swift fall arrest in confined spaces, elevated areas and mining shafts, while the V-EDGE is designed for horizontal, overhead and leading-edge use. Both units feature compact, durable housings, smooth braking mechanisms and corrosion-resistant materials to maximise safety and product longevity.

## LATCHWAYS® PERSONAL RESCUE DEVICE

The Latchways Personal Rescue Device (PRD) delivers fast, reliable rescue from height. Combining a full-body harness with an integrated descent system, it allows workers to lower themselves safely in seconds.

Compact, easy to use, self-activated, maintenance free and requiring no rescue plan. The PRD is compliant with global safety standards and is essential for any work-at-height environment.

## TEMPORARY HORIZONTAL LIFELINE

The Temporary Horizontal Lifeline (THLL) delivers flexible, reliable fall protection for any work at height.

Available in multiple lengths and in rope or cable options, it's engineered for quick installation, requires no tools and adaptable to a variety of applications. Keeping your team safe and productive wherever they work.

## SKED STRETCHER

The Sked Basic Rescue Stretcher provides reliable patient protection in confined spaces, high-angle rescues, technical or land-based applications.

Its design allows horizontal hoisting and vertical lifting. Once secured, the stretcher becomes rigid with durable plastic protecting the patient while enabling safe extrication. It rolls up for storage in a tough Cordura backpack, weighs 8.6 kg and comes complete for most rescue operations.

## HEAD PROTECTION

Locally made in South Africa from 100% virgin HDPE, including a ratchet liner/suspension system. Built for mining, OGP and industrial work. It's strong, comfortable and designed for all-day wear.

Optional cap lamp mounting with two light positions and built-in cable management keeps everything secure and out of the way.
